## Access JAWS in the SCC computing labs

This guide is intended to walk you through the process of accessing JAWS, a screen reader software available in <u>PCC computing labs</u>. Since we use a program to manage access to the Windows desktop, JAWS may be required to navigate through the desktop log-in process.

## **Access JAWS**

- Because no screen reading software is running by default when you start working on computers in the SCC labs, you will need to open JAWS with Windows-Ctrl-J.
- 2. JAWS is now running, and you will be able to use it until logging off the computer.
- 3. Once JAWS is running, do the following to log in:
  - a. Press Space Bar to get to the login screen.
  - b. Enter your PCC username and then press Tab.
  - c. Enter your PCC password and then press Enter.
- 4. A short pause will occur while the desktop is loaded.
- 5. To log off the computer, press Tab until you get to the **Log Off** prompt
- 6. Press Enter on the **Log Off** prompt to end your session and restart the computer.
